1. Project Summary

TEAM10 Clothing Store is a Laravel-based web application that combines a public shopping interface, user sign in and registration, session cart management, KHQR payment processing, invoice generation, and a role-based admin workspace for managing products, categories, slides, orders, and staff.

Platform and package stack

Laravel 12

PHP 8.2

Bootstrap 5.3

Vite 7

KHQR Gateway

Simple QRCode

Bootstrap Icons

Main feature groups

- Storefront browsing with category filters and product cards.
- User registration and sign-in with phone or email support.
- Product detail pages with size and color selection.
- Cart, checkout, KHQR payment verification, and invoice output.
- Admin dashboard analytics with revenue, units sold, and payment status charts.
- Role-based staff access for admin, stock controller, and employee accounts.

2. Color System and Typography

The interface is built around a clean blue-led palette with white content surfaces, slate helper text, and a few stronger accents for actions and status. Typography is split between the primary application shell and the authentication screens.

Primary Blue

#28559A

Main buttons, dashboard emphasis, action CTAs, and structural highlights.

Primary Dark

#1F3E77

Hover depth, darker emphasis, and checkout/admin contrast states.

Accent Blue

#3778C2

Chips, charts, focus states, and secondary emphasis blocks.

Brand Ink

#150734

Main dark text tone across storefront content and brand identity areas.

Base Background

#F3F6FB

Shared page background for store pages, admin shell, and auth environments.

Muted Slate

#64748B

Subtitles, helper text, meta labels, and lower-emphasis information.

Main application font**Space Grotesk**

Used in the storefront and admin panel to give the product and dashboard experience a sharper, more modern visual tone.

Authentication font**Poppins**

Used in admin and user authentication screens for a softer, cleaner form presentation.

Corner system**2px global radius**

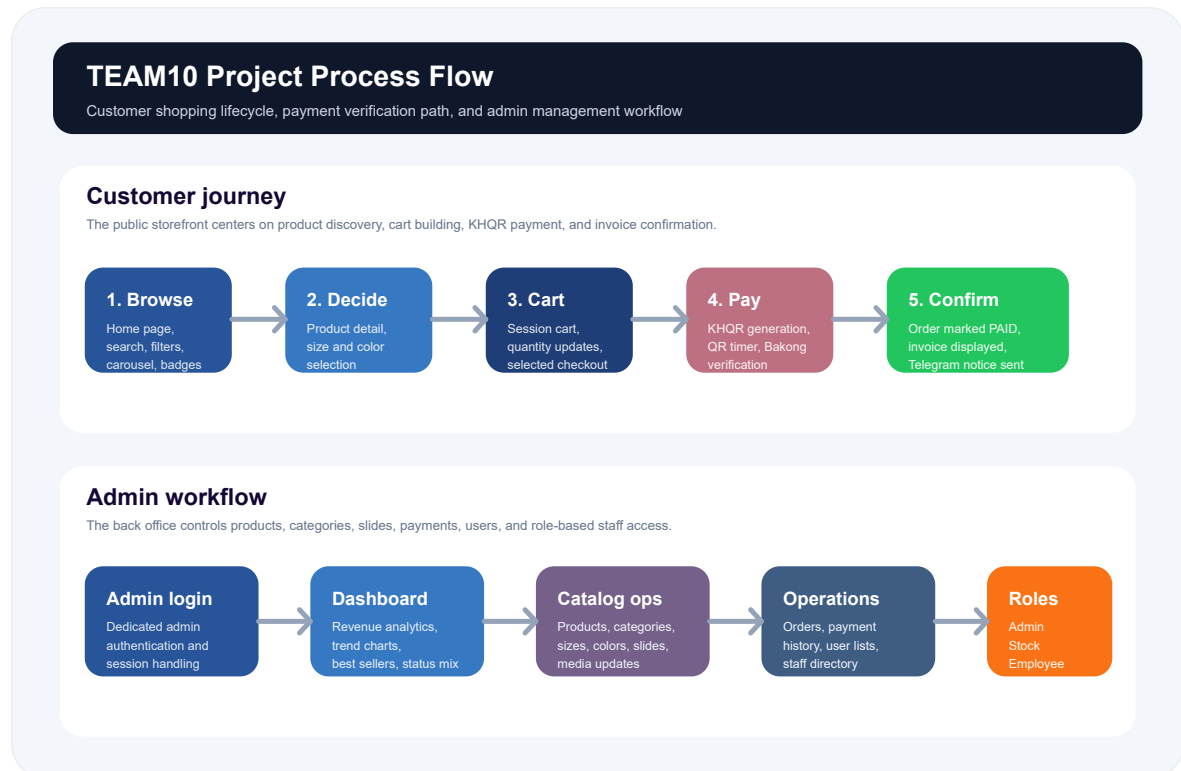

The shared layout forces a tight 2px radius across buttons, cards, inputs, and Bootstrap rounded utilities.

Icon system**Bootstrap Icons**

Icons are used throughout navigation, actions, cart states, analytics, and authentication controls.

3. Project Process

The application has two major tracks: the customer purchase journey and the admin management workflow. The diagram below gives a high-level map of the full system process.

Flow map covering shopping, KHQR payment confirmation, and admin-side operations.

Customer journey

1. User opens the home page and browses products by category or search.
2. User registers or signs in when account-based checkout is needed.
3. User reviews product detail, selects size and color, then adds the item to cart.
4. User reviews the cart and proceeds to the KHQR checkout screen.

Admin workflow

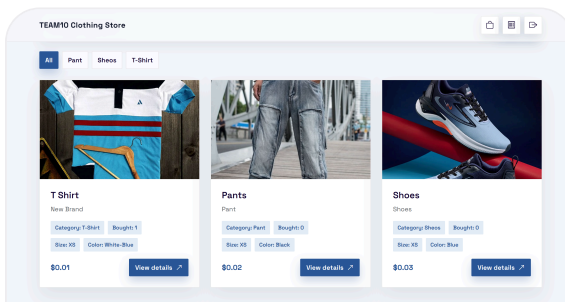

1. Admin signs in through the dedicated back-office login page.
2. The dashboard shows revenue, trends, paid orders, top products, and order mix.
3. Catalog pages manage products, categories, colors, sizes, and slideshow assets.
4. Operational pages track order history, paid payments, and staff/user access.

5. The system generates a QR code, stores a pending order, and waits for Bakong verification.
6. After confirmation, the order becomes paid and the invoice page is displayed.

5. Role checks decide which staff can create, edit, or delete each resource.

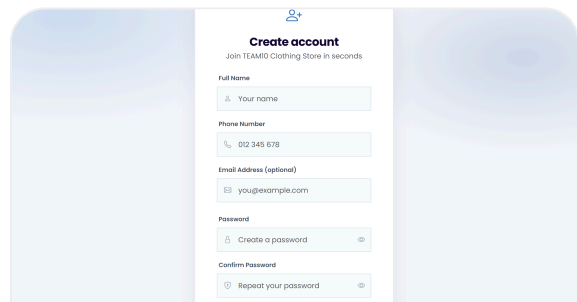

4. Customer-Side Screens

The following images document the customer-facing flow using the updated screenshots from docs/assets. The refreshed T-shirt image appears on the storefront catalog and admin product listing.

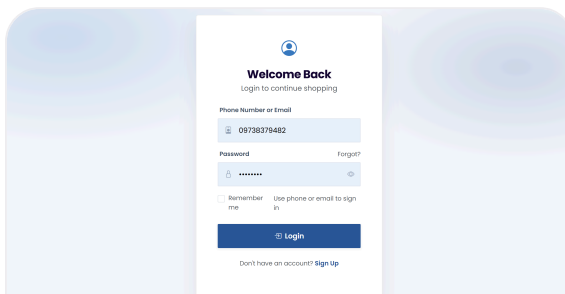

Main page

Shows category filters, product cards, and the updated T-shirt thumbnail in the storefront listing.

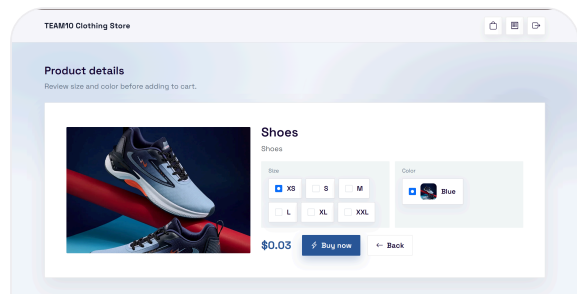

User sign up

Registration form with phone number, optional email, and password confirmation workflow.

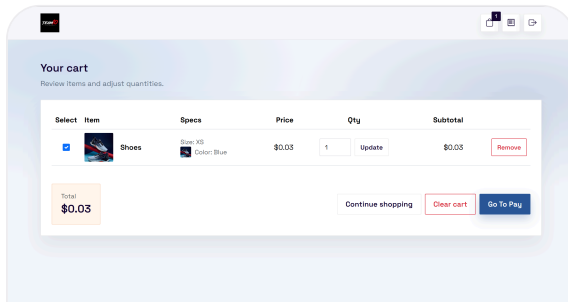

User sign in

Login screen that accepts either a phone number or an email address.

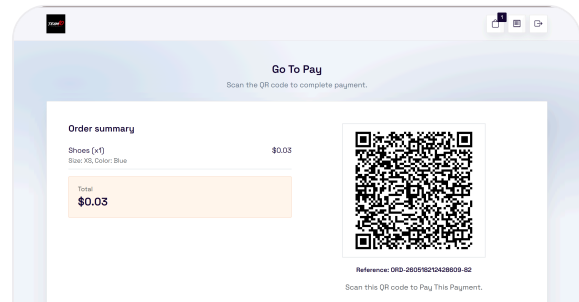

Product detail

Displays size and color selectors, product image, and the purchase call-to-action layout.

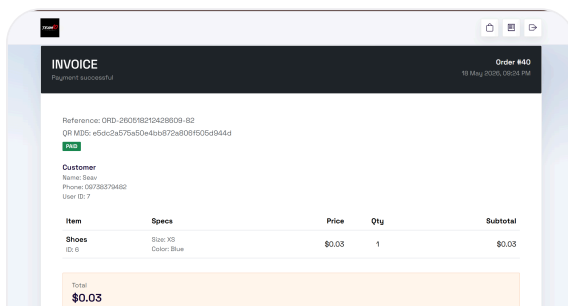

Cart review

Users can review selected items, adjust quantity, remove items, or continue to payment.

KHQR payment

Generates the QR code, reference number, amount summary, and the active payment verification step.

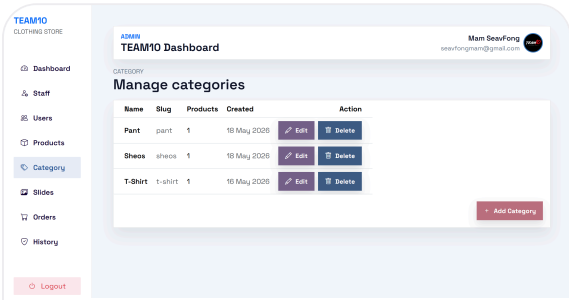

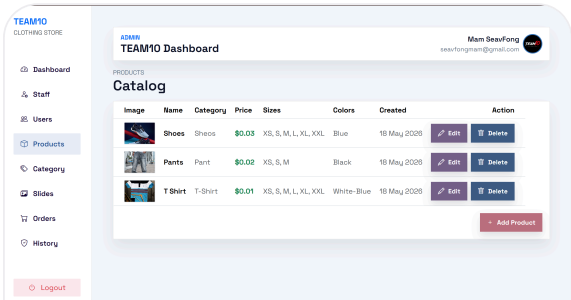

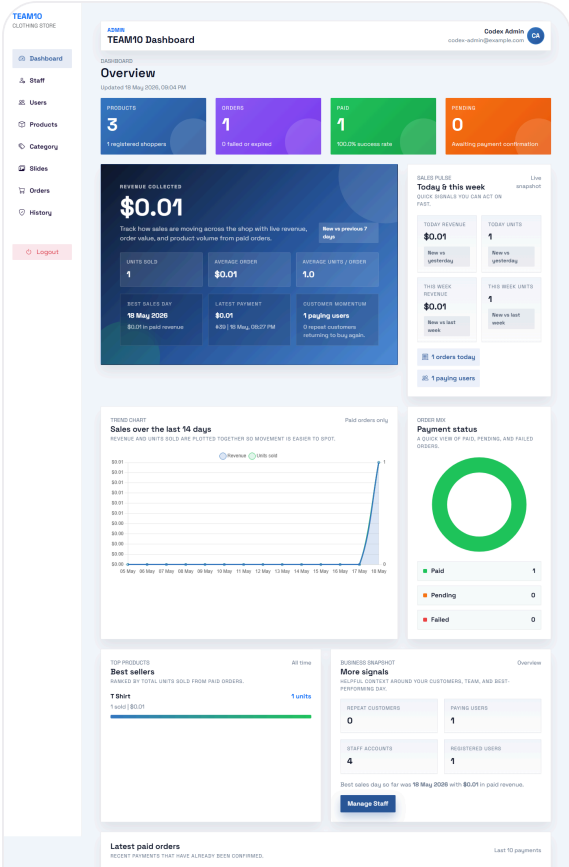

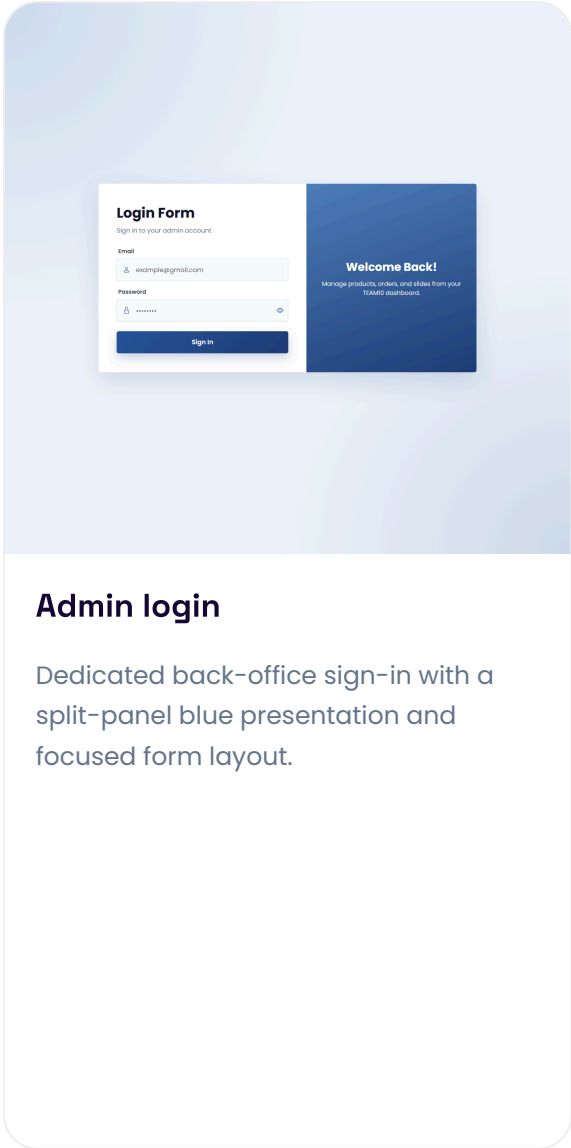

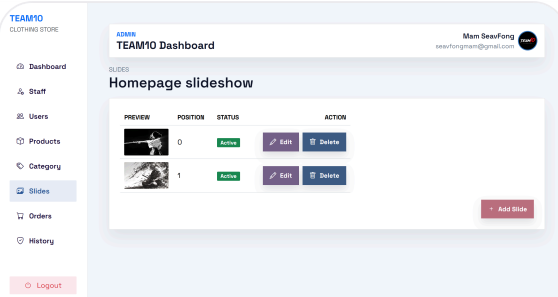

Paid invoice

Shows the completed transaction, customer details, order lines, and payment status after success.

5. Admin-Side Screens

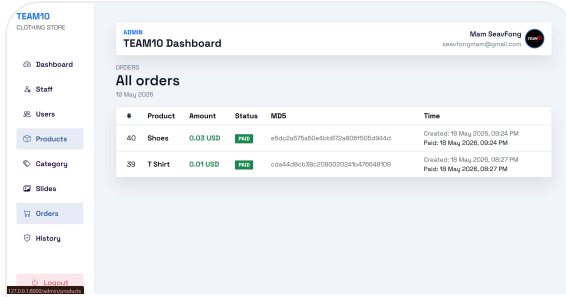

These images capture the management layer of the project, including analytics, catalog tools, and order operations.

Slides management

Homepage slideshow administration with preview thumbnails, position, active status, and controls.

Orders page

Operational order history with product name, amount, status, MD5, and paid/created timestamps.

6. Key Source Files

These files drive the design system, data flow, and process documented in this report.

`resources/views/layouts/app.blade.php`

Shared application shell and the global 2px radius override.

`resources/views/products/_styles.blade.php`

Storefront palette, component styling, buttons, cards, and responsive shopping UI rules.

`resources/views/admin/layouts/app.blade.php`

Admin layout, navigation, typography, card system, and action button styling.

`resources/views/auth/login.blade.php`

Admin login page design and session-expired handling UI.

`routes/web.php`

Public routes, user auth, cart, checkout, and admin route definitions.

`app/Http/Controllers/ProductController.php`

Product listing, search, category filter, and total-bought decoration logic.

`app/Http/Controllers/CartController.php`

Session-based cart add, update, remove, and clear behaviors.

`app/Http/Controllers/PaymentController.php`

KHQR generation, pending order creation, verification polling, invoice, and Telegram notification flow.

`app/Http/Controllers/UserAuthController.php`

User registration, login, phone/email normalization, and logout flow.

`app/Http/Controllers/Admin/OrderAdminController.p`

Dashboard analytics, revenue aggregation, charts, and operational reporting logic.
